

# BRILLIANT!

INTRODUCING OUR NEW AVR-3801 RECEIVER, COMBINING THE LATEST SURROUND SOUND DECODING TECHNOLOGIES WITH A POWERFUL 7-CHANNEL AMPLIFIER SECTION.

It's genius. Denon proudly introduces the AVR-3801, the new high-performance, highly affordable control component for your home theater system. It brings you the latest surround sound decoding technologies, including dts Extended Surround Discrete 6.1,

dts ES Matrix 6.1, dts Neo:6 Cinema & Music, as well as Dolby Digital Matrix 6.1 decoding. Powered by the latest Analog Devices SHARC 32 bit floating point DSP processor, the AVR-3801 features 8 channels of Analog Devices 24 bit, 96 kHz DACs, and 8 Channel External Input and 8 Pre-Amp Outputs for future system upgrade capability. Denon's exclusive 5 Channel & 7 Channel Stereo functions provide musically honest surround sound with your favorite stereo sources. And for optimum picture quality, the AVR-3801 features wideband (progressive & DTV compatible) component video switching. What's more, the AVR-3801 also brings you Denon's equal power amplifier design, along with high current discrete output devices, with each of the 7 channels rated at 105 watts (8 ohms, .05% THD, 20Hz-20 kHz). Denon's AVR-3801 - the latest surround sound technology for far less than you'd ever imagine. Ingenious, to say the least.

**DENON**  
the first name in digital audio

EXTENDED SURROUND 6.1
